

MedECC Special Assessment Report

Climate and Environmental Coastal Risks in the Mediterranean

Table of contents

1 Context and framing

1.1 Introduction

1.1.1 Mediterranean coastal risks

1.1.2 The science-policy context

1.1.3 The Mediterranean coastal region considered

Box 1.1 Core concepts

1.2 Climate and environmental change, and impacts in the Mediterranean

1.2.1 Observed and future climate change

1.2.2 Environmental aspects

1.2.3 Vulnerability, exposure and impacts

1.3 Coastal risks in the Mediterranean

1.3.1 Synthesis of assessed risks

1.3.2 Synthesis of risk reduction measures considered

Box 1.2 The risk framing and schematic overview of the report

1.4. A guide to the assessment

1.4.1 Common dimensions of integration

1.4.2 Communicating assessment findings consistently

1.4.3 Values and the interplay with nature and society

1.4.4 Ethical considerations

2 Drivers and their interactions

2.1 Introduction

2.2 Climate and geological drivers

2.2.2 Precipitation

2.2.3 Atmospheric circulation

2.2.4 Coastal flooding

2.2.5 Sea water temperature, salinity and acidification

2.2.6 Net hydrological balance: evaporation, precipitation and river runoff

2.2.7 Sea level rise and (permanent) coastal submersion

2.2.8 Natural and anthropic land subsidence over the Mediterranean coast

2.3 Biological drivers

2.3.1 Invasive alien species

2.3.2 Changes in the limits of species distribution

2.3.3 Jellyfish blooms

- 2.4 Pollution drivers
 - 2.4.1 Nutrients
 - 2.4.2 Trace metals
 - 2.4.3 Plastics
 - 2.4.4 Emerging pollutants
 - 2.4.5 Air pollution
- 2.5. Social and economic drivers
 - 2.5.1 Current and future socio-economic trends across the coastal region
 - 2.5.2 The economic use of the coast

3 Impacts and risks

- 3.1 Introduction
- 3.2 Main risks in the coastal zone
 - 3.2.1 Coastal risk assessment
 - 3.2.2 Coastal erosion risks
 - 3.2.3 Flood risks in the coastal zone
 - 3.2.4 Tsunamis and meteotsunamis in the Mediterranean
 - 3.2.4 Scarcity of water resources with appropriate quality for different uses and/or the environment preservation.
 - 3.2.5 Coastal pollution risks
 - 3.2.6 Risks of biological origin
- 3.3 Impacts on the Economic system
 - 3.3.1 Impacts on tourism
 - 3.3.2 Impacts on food security and agriculture
 - 3.3.3 Impacts on fisheries
 - 3.3.4 Impacts on coastal infrastructures and ports
- 3.4 Impacts on the human system
 - 3.4.1 Impacts on the cultural heritage (natural and built)
 - 3.4.2 Impacts on the human health
- 3.5 Impacts on the natural system
 - 3.5.1 Impacts on coastal low-lying/wetlands/deltaic systems
 - 3.5.2 Impacts on coastal ecosystems

4 Managing climatic and environmental risks

- 4.1 Introduction
- 4.2 Climate change risks and adaptation
 - 4.2.1 Coastal flooding
 - 4.2.2 Coastal erosion and shoreline changes
 - 4.2.3 Coastal ecosystems changes
 - 4.2.4 Reduced coastal water resources

- 4.2.5 Acidification of coastal waters
- 4.3 Pollution
- 4.4 Invasive species
- 4.5 Risk synergies and management considerations
- 4.6 Barriers to effective responses
- 4.7 Science policy interface
 - 4.7.1 Defining science needed for policy making in the times of climate emergency
 - 4.7.2 Two worlds – science and policy making: barriers, obstacles, needs, opportunities
 - 4.7.3 Possible solutions: how to bring science closer to the policy makers, how to enable policy makers to use science
 - 4.7.4 Examples in the Mediterranean

5 Sustainable development pathways

- 5.1 Introduction
 - 5.1.1 Definitions and context
 - 5.1.2 Layout of the chapter
- 5.2 Climate change related stress in the Mediterranean
 - 5.2.1 GHG Emissions in the Mediterranean: a short summary
 - 5.2.2 Mitigation and adaptation efforts and the Nationally Determined Contribution (NDCs) in the Mediterranean Basin
 - 5.2.3 Benefits and co-benefits of mitigation and adaptation
 - 5.2.4 Relationship of mitigation & adaptation efforts to Sustainable Development Goals (SDGs)
- 5.3 Sustainable pathways and significant targets across Sustainable Development Goals (SDGs)
 - 5.3.1 Determining the pathways to sustainability for major sectors
 - 5.3.2 Scenarios and pathways to achieve the Sustainable Development Goals (SDGs)
 - 5.3.3 Best practices and successful case studies in the Mediterranean coastal areas
 - Box 5.1 Transformative pathway for sustainable development
- 5.4 Social equity and climate justice
 - 5.4.1 The links between social inequalities and sustainable pathways in coastal communities
 - 5.4.2 Access to social infrastructure
 - 5.4.3 Inclusion
 - 5.4.4 Gender, climate justice and transformative pathways
 - 5.4.5 Diversity
 - 5.4.6 Access to climate finance funds
 - Box 5.2: Capacity building and knowledge transfer for sustainable development

MedECC Coordinators:

Wolfgang Cramer (CNRS, IMBE, France), **Fatima DRIOUECH** (University Mohammed VI Polytechnic, Morocco), **Joël GUIOT** (CNRS, CEREGE, France)

Report Coordinators:

Salpie Djoundourian (Lebanese American University, Lebanon), **Piero Lionello** (University of Salento, Italy), **Maria Carmen Llasat** (University of Barcelona, Spain)

Coordinating Lead Authors:

Mohamed Abdrabo (Alexandria University, Egypt), **Murat Belivermis** (Istanbul University, Türkiye), **Z. Selmin Burak** (Istanbul University, Türkiye), **Dario Camuffo** (CNR - Institute of Atmospheric Sciences and Climate, Italy), **Salpie Djoundourian** (Lebanese American University, Lebanon, Lebanon), **Nathalie Hilmi** (Centre Scientifique De Monaco, Monaco), **José A. Jiménez** (Universitat Politècnica De Catalunya, Spain), **Suzan Kholeif** (Icsm-Coastal Changes, Egypt), **Stefano Moncada** (Islands and Small States Institute, University of Malta, Malta), **Anna Pirani** (International Centre for Theoretical Physics, Italy), **Agustín Sánchez-Arcilla** (Universitat Politècnica De Catalunya, Spain), **Athanasios Vafeidis** (Christian-Albrechts University, Germany)

Lead Authors:

Elham Ali (Suez University, Egypt), **Mario V Balzan** (Institute of Applied Sciences, Malta), **Alessandra Bonazza** (University of Bologna, Italy), **Nuno Caiola** (Eurecat - Climate Change, Spain), **Margaret Camilleri Fenech** (University of Malta, Malta), **Marie-Yasmine Dechraoui Bottein** (Université Côte d'Azur, France), **Nazli Demirel** (Istanbul University, Türkiye), **Mita Drius** (Libera Università di Bolzano, Italy), **Shekoofeh Farahmand** (University of Isfahan, Iran), **Savvas Genitsaris** (National and Kapodistrian University of Athens, Greece), **Mauricio González** (IH Cantabria, Spain), **Ana Iglesias** (Polytechnic University of Madrid, Spain), **Sana Ben Ismail** (Institut National des Sciences et Technologies de la Mer, Tunisia), **María Carmen Llasat** (University of Barcelona, Spain), **Gonéric Le Cozannet** (BRGM, France), **Nadia Mhammdi** (University Mohammed V, Morocco), **Sebastià Montserrat** (Universitat de les Illes Balears, Spain), **Michelle Portman** (Israel Institute of Technology, Israel), **Daria Povh Škugor** (UN Environment Programme / Mediterranean Action Plan, Croatia), **David Pulido-Velazquez** (Instituto Geológico y Minero de España, Spain), **Estela Romero** (CREAF, Spain), **Alain Safa** (Université Sophia-Antipolis, France), **Francesca Spagnuolo** (Superiore Sant'anna of Pisa, Italy), **Matteo Vacchi** (Università di Pisa, Italy), **Claudia Wolff** (Christian-Albrechts-Universität, Germany)

Contributing Authors:

Emma Calikanzaros (Université Côte d'Azur, France), **Mine Cinar** (Loyola University Chicago, USA), **Sinja Dittmann** (Leibniz Institute for Science, Germany), **Claudio Ferrari** (Università di Genova, Italy), **Mounir Ghribi** (OGS, Italy/Tunisia), **Katarzyna Marini** (MedECC Secretariat/Plan Bleu, France), **Alessio Tei** (Università degli Studi Genova, Italy), **Alban Thomas** (INRAE, France)
